

Director, Biostatistics

Are you an experienced biostatistician and do you thrive in a highly professional, dynamic and inspiring environment? Would you like the chance to lead and further develop the statistics department with a smooth decision-making process and valued employee influence? Then you may be our new statistical expert and Director of Biostatistics at Larix.

Larix A/S is a Nordic Contract Research Organisation – we offer full-service solutions within the pharmaceutical and medical device areas. Our headquarters are located near Copenhagen in the middle of the Medicon Valley region, and we have strong ties to the thriving pharmaceutical and biotech activities in this region. Your place of work can be either Lund or Copenhagen – depending on your preferences. We are working closely together with our sister company, Aixial, which is a larger French CRO. This gives us all the advantages of being a small agile and flexible company combined with support from a larger company when it comes to e.g. systems and resources.

At Larix, you will be heading the Biostatistics group – your main tasks will be to further develop the group of biostatisticians and to participate in the daily biostatistical work. We are working either in-house at Larix following the internal SOPs or as outsourced consultants following the client SOPs. You will also be involved in client contacts and contracts, employee mentoring and coaching as well as ensuring delivery of high-quality services across the department.

At Larix, we keep a friendly atmosphere – we believe having fun while working is important. We are a relatively small company with approximately 55 employees, and we have all the benefits of being able to collaborate across functions, follow clinical trial processes from start to finish, and learn from each other. You will be a member of our experienced Management Team and contribute to the company's overall planning and strategy.

You are a senior biostatistician – we will get to know you as a proactive and competent employee who approaches projects with a team player's spirit. Moreover:

- You have 10+ years of experience as a biostatistician in pharmaceutical or biotech companies and a strong network within these areas. Experience from a CRO is an asset.
- You have a relevant university degree in statistics, engineering, life sciences or equivalent, preferably combined with a PhD, and you have a broad knowledge of several therapeutic areas.
- You will hold the overall professional responsibility for the biostatistics area. Therefore, you must have a scientific mindset and up-to-date knowledge of biostatistics as used in clinical studies and regulatory discussions.
- You have profound knowledge of SAS and R, while solid experience with other languages such as VBA and C# is an advantage.
- You have a strong professional network within the Danish/Swedish pharma/biotech/medtech environment.
- You have excellent communication skills. You speak one of the Scandinavian languages (DK, SE, NO) and understand the other two. You speak and write English effortlessly.

We look forward to welcoming you on board - we offer a competitive salary package including pension scheme, life and medical cover, ongoing education, and the opportunity to work at home from time to time.
